

# Ideal Gas Equation

Course on States of Matter for Class XI

This chapter mainly deals with parameters/prop  
associated with gases.

General difference solid, liq, gas

Properties

Intermolecular  
force

translational  
KE

Volume

Parameters used to define a gas  $\rightarrow$   
 $1 \text{ dm} = 0.1 \text{ m}$

① Mass/moles of gas

$$\begin{aligned} 1 \text{ L} &= 1000 \text{ ml} \\ &= 1000 \text{ cc} \\ &= 1000 \text{ cm}^3 \\ &= 1 \text{ dm}^3 \\ &= 10^{-3} \text{ m}^3 \end{aligned}$$

② Volume of gas = Vol of container

③ Temperature  $\rightarrow$

$$T(\text{K}) = T(^{\circ}\text{C}) + 273.15$$

$$\frac{9}{5}t(^{\circ}\text{C}) + 32 = T(^{\circ}\text{F})$$

$$\frac{t(^{\circ}\text{C}) - 0}{100} = \frac{T(^{\circ}\text{F}) - 32}{180}$$

$$\frac{t(^{\circ}\text{C}) - 0}{100} = \frac{T(^{\circ}\text{F}) - 32}{180}$$

Pressure :  $\rightarrow$

$$P = h d g$$

$$P = \frac{F}{A} = \frac{m g}{A} = \frac{(\cancel{A} \times h) d g}{\cancel{A}}$$

$$P = h d g$$

$$g = 9.8 \text{ m/sec}^2$$

Pressure exerted by  
the gases is due to  
its collision with walls

Barometer  $\rightarrow$  Used to measure atmospheric pressure.

Vacuum

$$h d g = P_{atm}$$

$$d = 13.6 \text{ gm/cm}^3$$

$$h = 760 \text{ mm of Hg} = 760 \text{ torr}$$
$$= 76 \text{ cm of Hg}$$

$$P_{atm} = 0.76 \text{ m} \times 13600 \text{ kg/m}^3 \times 9.81 \text{ m/sec}^2$$

$$P_{\text{atm}} = 1.01325 \times 10^5 \text{ Pa} = 1 \text{ atm}$$

760 mm of Hg

250 mm of  $\text{H}_2^{\text{O}}$

# find the height of  $H_2O(l)$  Column  
which exerts = 1 atm (or 760 mm of Hg).

$$h_1 d_1 = h_2 d_2$$

$$h \times d = 76 \times 13.5$$

$$1 \text{ atm} = 760 \text{ mm of Hg}$$

$$= 760 \text{ torr}$$

$$= 1.01325 \times 10^5 \text{ Pa}$$

$$= 1.01325 \text{ bar}$$

$$= 10.33 \text{ m of } \text{H}_2\text{O}(l)$$

$$\underline{\underline{1 \text{ bar} = 10^5 \text{ Pa}}}$$

Manometer  $\rightarrow$  It is used to measure  
the pressure of gas  $\rightarrow$

$$\begin{aligned}
 P_{\text{gas}} &= P_{\text{atm}} + \frac{h d g}{1} \\
 &= (760 \text{ mm} + h) d g
 \end{aligned}$$
