- (B) ~ 11.6
- (C) None

27.6g  $\text{K}_2\text{CO}_3$  was treated by a series of reagents so as to convert all of its carbon to  $\text{K}_2\text{Zn}_3[\text{Fe}(\text{CN})_6]_2$ . Calculate the weight of the product.

[mol. wt. of  $\text{K}_2\text{CO}_3 = 138$  and mol. wt. of  $\text{K}_2\text{Zn}_3[\text{Fe}(\text{CN})_6]_2 = 698$ ]

Type-6 problems Problems related  
with parallel Rxn

Depending upon the relative amount of 'C' &  $O_2$ , product may be CO,  $CO_2$  or both. If  $O_2$  is in excess amount product will be  $CO_2$ , if carbon is in excess amount product will be CO. then find moles of product(s)
